

11 Reasons why MuckMat Pros Are Awesome!

MuckMat Pro — solves problems for lakefront owners like you. Now, *you can walk on your lake bottom without sinking in muck ever again... REALLY!*

I'm Douglas Fast, inventor of MuckMat Pro — here's why it's super awesome...

1. MuckMat Pro works right now

It works now — not months or weeks from now. Walk on MuckMat Pro as soon as it's installed.

2. Quick & Easy — “get a beach” in 30 minutes

That's all it takes to assemble and install a MuckMat Pro — 30-minutes!

The rigid frame fits in pockets sewn into the fabric. Frame pieces connect by simply slipping one end into the next.

3. MuckMat Pro stays on your lake bottom —

The steel frame holds it down — it doesn't move or drift.

4. Be Weed Free — Guaranteed!

MuckMat Pro prevents lake weeds from growing — even lily pads!

5. Chemical Free —

Chemicals don't work on muck. Even with no weeds, you'd still sink. Many people don't want toxic chemicals in their lake. And if you've tried them, you've seen firsthand — they don't control all your weeds.

6. MuckMat Pro is GUARANTEED!

Guaranteed by Lacey, Inc. — 100%! They always work. We guarantee all materials for three years. This brings up the fact that...

7. MuckMat Pro lasts a long time...

The aluminumized-steel frame lasts at least 50 years. Steel rusts slower underwater. Air is 21% oxygen — water is 1%. The fabric lasts as long as the steel, (In certain conditions, the fabric much longer). The MuckMat Pro lasts a long time.

8. Sand makes MuckMat Pro work even better...

Our fabric and grids are designed to hold sand and gravel (in road construction). Adding sand firms it up even more.

9. Clean your MuckMat Pro right in the lake —

It's easy, you might even enjoy it. You need to clean off silt, or weeds will eventually be able to grow.

Use a push broom, a lake rake (upside down) — or a squeegee! Sweep it (just like you would any floor) right on the lake bottom. How often you clean it is up to you — a couple times a year should do.

10. Costs less than a dock section, or a season of chemicals —

...And a MuckMat Pro will last a lot longer. The cost of a MuckMat Pro over 10 years works out to about the cost of dinner for two, once a year — and MuckMat Pros have zero calories.

11. Winter won't hurt it — REALLY!

Leave it in the lake! Ice won't bother it and yes — MuckMat Pro will be there in the spring. The only reason to take it out is if you have to. Which brings up "permits."

"Seasonal" or "Permanent" — do you need a permit?

In most states, "*seasonals*," like roll-in docks and swim rafts require no permit. Some states require permits for "*permanent*" structures like fixed docks and seawalls.

A MuckMat Pro can be either "*seasonal*" or "*permanent*." If it's installed in spring and taken out in the fall — it's "seasonal."

Adding sand makes it "permanent." States that allow sanding, also allow (or require) soil barriers to preserve sand — and MuckMat Pro is the best "soil barrier" there is! *If you're not sure, you can check with the regulating agency in your state or province.*

— Douglas Fast, Inventor of MuckMat Pro

*Standing on a MuckMat Pro
on over 4-feet of muck.*

MuckMat Pros really are amazing! You can see one in action [here](#). To order or get more information, call or text me anytime at 269 804-9404, or email me at LakematRose@gmail.com. I look forward to hearing from you!
